Professional Summary

Cloud and DevOps Engineer with hands-on, project-based experience building CI/CD pipelines with Jenkins and GitHub Actions, and provisioning AWS infrastructure using Terraform and Ansible. Practical experience configuring persistent storage, health probes, and automated recovery for production-style Kubernetes deployments. Comfortable with Infrastructure as Code principles and troubleshooting across multi-environment setups. A fast learner eager to build toward multi-AZ deployment architecture and advanced backup/restore strategies.

Skills

Cloud Platforms: AWS (EC2, S3, IAM, VPC, CloudWatch, SNS, EBS)

Containers & Orchestration: Docker, Docker Compose, Kubernetes, Helm

CI/CD: Jenkins, GitHub Actions

Infrastructure as Code: Terraform, Ansible

Linux Administration: RHEL 9, Linux

Version Control: Git, GitHub

Networking: Nginx, NGINX Ingress, Security Groups, AWS NLB

Programming / Scripting: Python

Monitoring & Alerting: CloudWatch, SNS, Prometheus, Grafana

Projects

TaskFlow — Production-Oriented MERN Application with Kubernetes & CI/CD

September 2026

React, Vite, Node.js, Express, MongoDB, Docker, Jenkins, Kubernetes, Helm, AWS EC2

- Built and deployed a MERN task management application (React/Vite, Node.js, Express, MongoDB) with CRUD operations, task status, priority, search, and filtering.
- Implemented automated Jenkins CI/CD triggered via GitHub webhooks, including backend testing, Docker image builds, and Docker Hub publishing.
- Deployed to AWS EC2 using Kubernetes and Helm, with NGINX Ingress, AWS Network Load Balancer, ConfigMaps, Secrets, health probes, resource limits, and rolling updates.
- Configured MongoDB persistent storage using AWS EBS CSI and Kubernetes PVCs, with secure credential management via Kubernetes Secrets.
- Performed controlled deployment failure testing using an invalid container image, troubleshooting via Kubernetes events and demonstrating recovery through Helm rollback.

Enterprise Linux Infrastructure Automation

July 2026

Linux, Ansible, Git

- Automated RHEL 9 Linux server administration using Ansible, reducing repetitive manual configuration tasks.
- Developed Ansible playbooks and roles to automate package installation, user management, file/directory creation, and service configuration.
- Implemented Ansible Vault to securely manage sensitive credentials and configuration variables.
- Troubleshot Ansible playbook errors, connectivity issues, permissions, variables, and service configuration problems.

Experience

Cloud and DevOps Intern — IPSR Solutions Ltd

2026

- Gained hands-on exposure to AWS cloud services, Linux server administration, and infrastructure automation using Ansible across 5+ internal projects.
- Collaborated with a cross-functional engineering team to support CI/CD pipeline setup and containerization tasks under mentor guidance, contributing to internal DevOps tooling.
- Participated in real-world deployment and system management tasks across 3 development environments (dev/staging/prod).

Achievements

- Automated infrastructure configuration and deployment workflows using Ansible and Docker as part of hands-on DevOps Engineer project work, reducing manual setup effort across 10+ server instances.
- Gained practical, project-based experience across the full DevOps lifecycle — provisioning (Terraform), configuration management (Ansible), containerization (Docker), and CI/CD (Jenkins, GitHub Actions).

Education

B.Tech, Artificial Intelligence and Data Science

2022 – 2026

Dhanalakshmi Srinivasan College of Engineering, Coimbatore, India — CGPA: 8.3
